

Have You Reviewed Your Cleaning Checklist Lately?

As employees returned to work post-pandemic, it became crucial to reevaluate office cleaning protocols. Now that years have passed since then, it's a good time to revisit that checklist, especially in areas severely impacted by the pandemic, like New York City. It is clear that the best [office cleaning NYC](#) offers now includes a broader range of services, with new capabilities that can enhance your daily cleaning procedures. A comprehensive checklist can significantly improve the quality of service your janitorial teams provide, ensuring they focus on high-priority cleaning areas for your company.

Additionally, sanitizing and disinfecting protocols for frequently touched surfaces are still valuable. With our evolving understanding of how germs spread through airborne particles when an infected individual is nearby, it's necessary to reassess the focus on surface disinfection. While it remains helpful, it may no longer be as critical as initially thought. This understanding shifts the focus to the HVAC systems in your office, highlighting opportunities to upgrade air filtration systems to enhance air quality. Improved ventilation can reduce the risk of airborne transmission, particularly in tightly packed spaces.

Your office cleaning is an option worth considering if you haven't already done so. Professional cleaning services employ trained technicians who are well-versed in properly using disinfectants and cleaning products. While in-house staff can be trained, keeping up with the latest developments in cleaning protocols can be challenging, and these professionals ensure adherence to current standards. Additionally, commercial cleaning contractors invest in the newest cleaning equipment and products, relieving you of these responsibilities so you can concentrate on your core business and its success.

If your organization had set environmental and sustainability goals, you may have needed to pause these initiatives during the pandemic. Now is an excellent time to revive them. Eco-friendly cleaning products are available that are effective yet gentle on the environment. Utilizing EPA-registered disinfectants ensures that surfaces remain sanitary during daily cleaning. Moreover, maintaining cleanliness in restrooms is a priority; fixtures, countertops, partitions, and floors require daily attention with the appropriate disinfecting agents to uphold hygiene standards in your workspace.
